## WITS DRIVERS

### What is WITS?

Measuresoft's **WITS Input and Output** drivers are plug-in device drivers for ScadaPro servers. They enable fast and secure data acquisition from a wide range of supported **WITS** devices.

WITS (Wellsite Information Transfer Specification) is a communications format used for the transfer of a wide variety of wellsite data from one computer system to another.

#### Features

Benefits

Support for up to 100 record types including pre-defined types applications

Serial and TCP/IP transport

Echo feature to re-transmit captured WITS input

Timeouts to flag transmission errors

Error value

Aggregates data from different sources and multiple feeds.

Multiple feeds to/from multiple servers provided by one licence.

dedicated PCs Reduced set up time, thereby reducing costs

Real-time feed of WITS data

Works on existing ScadaPro

servers and does not require

Facilitates the sharing of information (used by many companies).

Can Be effortlessly adopted and implemented by any company.

Can be adapted to meet new requirements as technology changes

Stahut	Disabled
